git log --online --graph

* a7f3c2e HEAD freelance On-demand software development 2023-now

Property management automation ERP (~220 bank accounts across 3 banks) · custom community management platform · real-time event monitoring system · Playwright scraper routed through client VPN with open banking integration

* 3d91ab7 open-source spotatui contributor – Rust/async 2025

Resolved async runtime bugs in Tokio-based playback pipeline · full MPRIS support implementation · multiple pull requests merged

* 9c44f1d project VideoVisionary – AI video analysis SaaS 2024

AI-powered video analysis platform · functional beta · pitched at Ecoinntech Business Awards 2024 and 2025 · 2nd place both editions

* 2b8e05c project Hyprion – Rust-native DE layer for Hyprland 2025-now

Unix socket IPC · newLine-delimited JSON · pub/sub architecture · Plymouth boot integration · components: hyprion-core, hyprion-theme, hyprion-crypthelper

* f12d9a1 infra Self-hosted production server 2023-now

Xeon E5-2680 V4 · 64GB ECC RAM · 18TB storage · Mailcow, Jellyfin, Pterodactyl, nginx, VPN, DNS/DHCP · security incident response: containment, forensic analysis, credential rotation, hardening

echo \$APPROACH

→ Systems programmer and full-stack developer comfortable across the entire stack, from bare-metal Linux and Rust async services to FastAPI backends and React frontends. I understand the metal, the OS, and the application layer, and I move between them without friction. I've run production infrastructure, responded to real security incidents, and shipped client software that handles real data. Security and efficiency aren't features I add at the end, they're how I build from the start.
